## Prior Knowledge

Recall multiplication and division facts for multiplication tables up to $12 \times 12$ (Y2-4)
Show that multiplication of 2 numbers can be done in any order (commutative) and division of 1 number by another cannot (Y2)
Recognise and use factor pairs and commutativity in mental calculations (Y4)
Identify multiples and factors, including finding all factor pairs of a number, and common factors of two numbers (Y5)
0. Know and use the vocabulary of prime numbers, prime factors and composite (non-prime) numbers (Y5)
. Establish whether a number up to 100 is prime and recall prime numbers up to 19 (Y5)
(0. Multiply numbers up to 4 digits by a one- or two-digit number using a formal written method, including long multiplication for two-digit numbers (Y5)
0. Multiply and divide numbers mentally drawing upon known facts (Y5)
6. Divide numbers up to 4 digits by a one-digit number using the formal written method of short division and interpret remainders appropriately for the context (Y5)
0. Multiply and divide whole numbers and those involving decimals by 10, 100 and 1,000 (Y5)
0. Recognise and use square numbers and cube numbers, and the notation for squared $\left({ }^{2}\right)$ and cubed $\left(^{3}\right)(\mathrm{Y} 5)$
6. Solve problems involving multiplication and division, including using their knowledge of factors and multiples, squares and cubes (Y5)
0. Solve problems involving multiplication and division and a combination of these, including understanding the meaning of the equals sign (Y5)
0. Solve problems involving multiplication and division, including scaling by simple fractions and problems involving simple rates (Y5)

|  | multiplication and division | Working Towards | Within | Expected | Above |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\stackrel{\bullet}{\bullet}$ | Multiply multi-digit numbers up to 4 digits by a two-digit whole number using the formal written method of long multiplication |  |  |  |  |
|  | Divide numbers up to 4 digits by a two-digit whole number using the formal written method of long division, and interpret remainders as whole number remainders, fractions, or by rounding, as appropriate for the context |  |  |  |  |
|  | Divide numbers up to 4 digits by a two-digit number using the formal written method of short division where appropriate, interpreting remainders according to the context |  |  |  |  |
|  | Perform mental calculations, including with mixed operations and large numbers |  |  |  |  |
|  | Identify common factors, common multiples and prime numbers |  |  |  |  |
|  | Use knowledge of the order of operations to carry out calculations involving the 4 operations |  |  |  |  |
|  | Solve problems involving multiplication and division |  |  |  |  |
|  | Use estimation to check answers to calculations and determine, in the context of a problem, an appropriate degree of accuracy |  |  |  |  |

Highlights: $\qquad$

| $\mathbf{B}$ | Brackets | $10 \times(4+2)=10 \times 6=60$ |
| :--- | :--- | :--- |
| $\mathbf{O}$ | Order | $5+2^{2}=5+4=9$ |
| $\mathbf{D}$ | Division | $10+6 \div 2=10+3=13$ |
| $\mathbf{M}$ | Multiplication | $10-4 \times 2=10-8=2$ |
| $\mathbf{A}$ | Addition | $10 \times 4+7=40+7=47$ |
| $\mathbf{S}$ | Subtraction | $10 \div 2-3=5-3=2$ |

## Glossary

| vocabulary | word class | definition |
| :--- | :--- | :--- |
| multiplication | noun | the process of combining matrices, vectors, or other quantities to obtain their product |
| division | noun | the process of dividing a matrix, vector, or other quantity to obtain a quotient |
| calculating | verb | determine (the amount or number of something) mathematically |
| arrays | noun | an arrangement of quantities or symbols in rows and columns; a matrix |
| integer | noun | a number which is not a fraction; a whole number |
| factor pairs |  | a set of two integers that give a particular product when multiplied together |
| product | the answer when two or more values are multiplied together |  |
| distributive law | multiplying a number by a group of numbers added together is the same as doing each multiplication <br> separately |  |
| common factor | noun | when the factors of two or more numbers are found, the factors that are the same are the common <br> factors |
| prime number | noun | a number that is divisible only by itself and 1 (e.g. 2, 3, 5, 7, 11) |
| prime factor | the prime factors of a positive integer are the prime numbers that divide that integer exactly |  |
| composite <br> number | noun | a whole number that can be made by multiplying other whole numbers. Example: 6 can be made by $2 \times$ <br> 3. |
| remainder | noun | the number which is left over in a division in which one quantity does not exactly divide another. <br> Example: 23 divided by 3 is 7, remainder 2" |
| decimal | adjective | relating to or denoting a system of numbers and arithmetic based on the number ten, tenth parts, and <br> powers of ten. <br> the product of a number multiplied by itself, e.g. $1,4,9,16$ <br> square number <br> noun |
| cube number | noun | the result when a number has been multiplied by itself twice. The symbol for cubed is 3 . Example: 8 is a <br> cube number because it's $2 \times 2 \times 2$ |
| common <br> multiples | a common multiple is defined as a whole number, a shared multiple of each set of numbers |  |

| $\times$ | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| 2 | 2 | 4 | 6 | 8 | 10 | 12 | 14 | 16 | 18 | 20 |
| 3 | 3 | 6 | 9 | 12 | 15 | 18 | 21 | 24 | 27 | 30 |
| 4 | 4 | 8 | 12 | 16 | 20 | 24 | 28 | 32 | 36 | 40 |
| 5 | 5 | 10 | 15 | 20 | 25 | 30 | 35 | 40 | 45 | 50 |
| 6 | 6 | 12 | 18 | 24 | 30 | 36 | 42 | 48 | 54 | 60 |
| 7 | 7 | 14 | 21 | 28 | 35 | 42 | 49 | 56 | 63 | 70 |
| 8 | 8 | 16 | 24 | 32 | 40 | 48 | 56 | 64 | 72 | 80 |
| 9 | 9 | 18 | 27 | 36 | 45 | 54 | 63 | 72 | 81 | 90 |
| 10 | 10 | 20 | 30 | 40 | 50 | 60 | 70 | 80 | 90 | 100 |

## Future Learning

## Key Stage 3

- Select and use appropriate calculation strategies to solve increasingly complex problems
- Interpret when the structure of a numerical problem requires additive, multiplicative or proportional reasoning
- Use the concepts and vocabulary of prime numbers, factors (or divisors), multiples, common factors, common multiples, highest common factor, lowest common multiple, prime factorisation, including using product notation and the unique factorisation property
- Use the four operations, including formal written methods, applied to integers, decimals, proper and improper fractions, and mixed numbers, all both positive and negative
- Use conventional notation for the priority of operations, including brackets, powers, roots and reciprocals
- Recognise and use relationships between operations including inverse operations
- Use integer powers and associated real roots (square, cube and higher), recognise powers of 2,3, 4, 5 and distinguish between exact representations of roots and their decimal approximations
- Interpret and compare numbers in standard form $A \times 10^{n} 1 \leq A<10$, where $n$ is a positive or negative integer or zero

## Key Stage 4

- Consolidate their numerical and mathematical capability from key stage 3 and extend their understanding of the number system to include powers, roots \{and fractional indices\}
- Select and use appropriate calculation strategies to solve increasingly complex problems, including exact calculations involving multiples of $\pi$ \{and surds\}, use of standard form and application and interpretation of limits of accuracy
- Estimate powers and roots of any given positive number\}
- Calculate with roots, and with integer \{and fractional\} indices
(1) Calculate exactly with fractions, \{surds\} and multiples of $\pi$; \{simplify surd expressions involving squares [for example $12434323=$ $x=x=x$
- Calculate with numbers in standard form $A 10 n$, where $1 \leq A<10$ and $n$ is an integer
